Copyright © 1970 by the Institute of Physics and individual contributors. All rights reserved.

Under Part 1, Section 7 of the Copyright Act 1956 some libraries are permitted to make single copies of articles for individuals requiring them for the purpose of research or private study. The classes of library accorded this privilege and the conditions under which it is available are set out in the Act and in the associated Board of Trade regulations (Statutory Instruments, 1957, No. 868). Most libraries attached to higher educational establishments and research organizations, whether in the UK or elsewhere, qualify for this privilege provided that they were not established, and are not conducted, for profit. The Act, however, restricts the concession to material not exceeding one article in any one publication and requires that the individual making use of the service must pay at least the cost price of producing the copy.

Except for single copies covered by the concession relating to research and private study no part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without permission of the copyright owners.

Published by The Institute of Physics, 47 Belgrave Square, London SW1, England, in association with the American Institute of Physics.

Journal of Physics A: General Physics is published as a bi-monthly journal. Details are available on request.

Printed in Great Britain by J W Arrowsmith Ltd. Set in 11/12pt Imprint.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Contents

NO 1 JANUARY 1971

Letters to the editor

- L1 *R V Jones* · Aberration of light in a moving medium
L3 *M W Kermode* · Numerical calculation of the S-state energy eigenvalues for a local potential
L6 *J Strnad* · Comments on the paper: Time measurement using a realizable atomic clock
L8 *W H McCrea* · Time measurement: Criticism of a paper by L M Stephenson
L14 *D K Bedford* · Impact ionization of micro-particles at low velocities
L18 *J C Barton* · Aperture of counter telescopes for parallel pairs of particles

Papers

- 1 *S F Edwards and M A Oliver* · The Stokes resistance for a polymer chain
11 *S Simons* · On entropy production for an isolated system
17 *J Krishna Rao* · Radiating Levi-Civita metric
21 *I B Whittingham* · Incoherent scattering of gamma rays in heavy atoms
38 *F D Gault* · Photoproduction, s-channel helicity conservation and Regge cuts in the t-channel
44 *D Mahanti, H L Yadav and B K Srivastava* · The binding energy of the alpha particle with a velocity-dependent potential containing a tensor component
49 *H L Yadav, D Mahanti and B K Srivastava* · The photodisintegration of helium
55 *P H Roberts and J Grant* · Motions in a Bose condensate—I: The structure of the large circular vortex
73 *J Lee* · On Phythian's perturbation theory for stationary homogeneous turbulence
77 *M V Berry and S R Reznik* · A simple theory for the densities of coexistent liquid and vapour through the transition region
85 *T E R Jones and K Walters* · The behaviour of materials under combined steady and oscillatory shear
101 *J M Savirón, M A Hidalgo, J C Yarza and D Gonzalez-Alvarez* · The FJO thermal diffusion column theory and the thermal diffusion factor
105 *D E G Williams* · The work function of an electron gas
108 *P C Stangeby and J E Allen* · Current limitation in mercury vapour discharges—I: Theory
120 *B E Keen and R V Aldridge* · Suppression and enhancement of a 'drift-type' instability in a magnetoplasma by a feedback technique

Contents

142 *J G Andrews and D T Swift-Hook* · Spherical probe in a flowing plasma

158 **Book reviews**

161 **Book notices**

NO 2 MARCH 1971

Letters to the editor

L21 *D T Swift-Hook and J G Andrews* · Cylindrical probe in a flowing plasma

L25 *F Watt, J W Hand and E E Schneider* · A controlled avalanche cause by electron cyclotron acceleration

L27 *S P Gary* · Instabilities in perpendicular collisionless shock waves

L31 *F Ashton and J King* · The electric charge of interacting cosmic ray particles at sea level

L34 *J Wdowczyk and A W Wolfendale* · Muon bundles in extensive air showers

L37 *J Wdowczyk, W Tkaczyk, C Adcock and A W Wolfendale* · The possibility of detectable fluxes of cosmic ray γ rays with energy above 10^{10} eV

Papers

165 *D K Saraswati* · Quantum electrodynamics in an analytic representation

184 *D S Chellone* · Wave tails in Born-Infield electrodynamics

197 *S J Lewandowski* · Electromagnetic field equations for anisotropic media

206 *C D Collinson* · A theorem on the local isometric embedding of empty space-times in a space of constant curvature

208 *J B Griffiths and R A Newing* · Geometrical aspects of the two-component neutrino field in general relativity

214 *D Husain* · Separable potentials and Coulomb interactions

217 *A F Omojola* · The binding energy of the alpha particle ^4He

231 *R Horák, L Mišta and J Peřina* · Approximate formulae for the superposition of coherent and chaotic fields

238 *G I Peters and L Allen* · Amplified spontaneous emission—I: The threshold condition

244 *R W Moore, K J M Moriarty and J H R Migneron* · A Regge quark model for $O^{-\frac{1}{2}+} \rightarrow O^{-\frac{1}{2}+}$ scattering

276 *C Adcock, R B Coats, A W Wolfendale and J Wdowczyk* · Theoretical analysis of extensive air showers—V: General analysis of muons above 1000 GeV

291 *B W Keck and J G Taylor* · On the equivalence theorem for S -matrix elements

298 *A M Arthurs and C W Coles* · Upper and lower bounds on generalized scattering lengths

306 *J B Griffiths and R A Newing* · Neutrino radiation fields in general relativity

310 **Book notices**

Contents

NO 3 MAY 1971

Letters to the editor

- L41 *R K Bullough and P J Caudrey* · Generalized nonrelativistic Lamb-shift theory
- L45 *J Trümper and M Samorski* · Comments on the paper 'High transverse momenta observed in air shower cores'
- L47 *M Bertolotti, B Crosignani, B Daino and P Di Porto* · The possibility of measuring spatial velocity correlation functions in a turbulent fluid by means of light scattering
- L50 *M W Kermode and P E Nunn* · Numerical calculation of the energy eigenvalues for a local potential
- L52 *B K Agarwal, C P Singh, K J Narain and A B Saxena* · $K^-p \rightarrow K^+ \Xi^-$ process in the two-meson-exchange peripheral model
- L56 *E Jakeman and E R Pike* · The spectral linewidth of laser noise and of fluctuations near other second-order phase transitions
- L58 *S Simons* · On the time variation of entropy
- L59 *I G Main, B T McCrone, B E Crossfield, C K Davis, G D Jones and P J Twin* · Isospin structure of an $E2$ transition matrix element in ^{27}Al and ^{27}Si

Papers

- 313 *J M Radcliffe* · Some properties of coherent spin states
- 324 *V Bezák* · The partition sum of an ideal gas in a random potential
- 328 *M L Chaudhury* · A model of nonlocal potential and alpha decay of deformed even nuclei
- 346 *B A Logan* · A crossover phenomenon in the photoelectric effect
- 352 *F Ashton, H J Edwards and G N Kelly* · The spectrum of cosmic ray neutrons at sea level in the range 0.4–1.2 GeV
- 367 *P Kiraly, M G Thompson and A W Wolfendale* · Cosmic ray showers produced by muon bremsstrahlung
- 377 *L Allen and G I Peters* · Amplified spontaneous emission—II: The connection with laser theory
- 382 *N R Ogg* · A Huygen's principle for anisotropic media
- 389 *C N Lashmore-Davies* · Stabilization of a low-density plasma in a simple magnetic mirror by feedback control
- 401 *G T Roberts* · The diffusive flow of gases between two parallel plates
- 413 *W G S Scaife* · Relative permittivity of organic liquids as a function of pressure and temperature
- 426 *I J Kirby and J Wilks* · Zero sound in liquid ^3He
- 434 *S S Mathur, P N Gupta and S C Sinha* · Theoretical derivation of Wada's and Rao's relations
- 437 *V K Jaiswal* · Thermal conductivity of polyatomic gaseous mixtures at elevated temperatures

Book reviews

- 439 *J Schwinger* · Particles, sources and fields
- 440 *E Roubine* · Mathematics applied to physics

Contents

NO 4 JULY 1971

Letters to the editor

- L65** *J J Sanderson and E R Priest* · Bernstein wave instability in collisionless shocks
- L67** *B E Keen and W H W Fletcher* · Decay instability at the ion-sound frequency induced by a large amplitude Bernstein mode in a plasma
- L73** *L Mišta* · *N*-photon factorial moments for superposition of coherent and chaotic fields
- L75** *C A Ayre, M A Hamdan, C J Hume, M G Thompson, S C Wells, M R Whalley and A W Wolfendale* · Energy loss of cosmic ray muons in the range 5–40 GeV/c
- L77** *G R Bishop* · Electric monopole sum rule and helium burning

Papers

- 441** *B W Keck and J G Taylor* · Renormalization of nonpolynomial Lagrangians
- 456** *J L Martin and M G Watts* · The end-point distribution of self-avoiding walks on a crystal lattice
- 464** *N K Martinov and N A Nikolov* · Structure of an electronic-ionic gas
- 467** *N K Martinov and N A Nikolov* · Statistical model of solids
- 471** *D Langbein* · The integration of multiplet van der Waals interactions
- 477** *Y Fukui and T Morita* · Derivation of the stationary generalized Langevin equation
- 491** *C B G McIntosh* · Particle gravitation theories of the Hoyle-Narlikar type
- 501** *D Salt* · Action principles for the elastic solid and the perfect fluid in general relativity
- 508** *P R Chaudhuri* · Cosmic rays, neutron stars and pulsars
- 517** *E Jakeman, E R Pike and S Swain* · Statistical accuracy in the digital autocorrelation of photon counting fluctuations
- 535** *S Jayaram and V K Tripathi* · Harmonic generation due to nonlinear mixing of two strong microwaves in a magnetoplasma
- 546** *J L Brun, D González-Alvarez, M A Hidalgo, J M Savirón and J C Yarza* · Transient operation in thermal diffusion columns
- 549** *Uma Kapur, V D Gupta and Chaman Mehrotra* · Melting of normal paraffin hydrocarbons
- 555** *E R Pike and S Swain* · A general approach to nonequilibrium quantum statistics
- 564** *L Allen and G I Peters* · Amplified spontaneous emission III. Intensity and saturation
- 574** *M B Nicholson-Florence* · Intensity dependence of free-free absorption
- 583** *J R Ellis* · A classical description of spinning particles

NO 5 SEPTEMBER 1971

Letters to the editor

- L81** *J B Griffiths and R A Newing* · A note on neutrino-gravitational fields with positive energy density
- L82** *D S McKenzie and M A Moore* · Shape of a self-avoiding walk or polymer chain

Contents

- L86** *A V Jones and G J Papadopoulos* · On the exact propagator
- L89** *C A Ayre, M A Hamdan, F W Holroyd, C J Hume, B C Nandi, M G Thompson, S C Wells, M R Whalley and A W Wolfendale* · Absolute intensities of cosmic ray muons above 3.48 and 7.12 GeV/c
- L93** *R P Singhal, C S Curran, T E Drake, W A Gillespie, A Johnston and E W Lees* · Nuclear charge distributions of ^{89}Y , ^{90}Zr and ^{92}Mo by elastic electron scattering
- L97** *M Bertolotti, B Daino, P Di Porto, F Scudieri and D Sette* · Light scattering by electrohydrodynamic fluctuations in nematic liquid crystals

Papers

- 597** *B O J Tupper and G W Phillips* · Generalized field equations in general relativity
- 611** *C J Coleman* · A simple relativistic theory of gravitation
- 617** *M A Rotenburg* · Electromagnetic wave tails in the second approximation to the Einstein-Maxwell equations
- 632** *R N Sen and C Weil* · Degenerate vacuum formalism for spontaneous symmetry breakdown
- 638** *D F Walls* · A quantum theoretic treatment of double-resonance phenomena
- 646** *S K Bose and W C Henneberger* · Inequivalence of representations of commutation relations obtained by orthogonal transformations in field theory
- 649** *F Ashton and R B Coats* · Electromagnetic interactions of cosmic-ray muons at large zenith angles at sea level
- 660** *F El Bedewi and A Goned* · The coupling between primary and secondary cosmic-ray muon variations at high energies
- 665** *R J M Carr and H R Post* · Many-particle systems VII. Angular momenta and an improved lower bound: an approach towards shell theory
- 679** *J G Ferreira, J C Soares, A Barroso and F B Gil* · The fluorescence, Auger, and Coster Kronig L_{II} subshell yields of thorium
- 685** *R J Henery* · The generalized Langevin equation and the fluctuation-dissipation theorems
- 695** *J Grant* · Motions in a Bose condensate II. The oscillations of the rectilinear and large circular vortex lines
- 717** *D J Gates* · Crystal structure and melting in a cell model I. Solvable lattices and isomorphisms
- 728** *D J Gates* · Crystal structure and melting in a cell model II. First-order transitions and metastable states
- 744** *P Sen* · Positron lifetime studies in some crystals
- 748** **Book reviews**

NO 6 NOVEMBER 1971

Letters to the editor

- L103** *H C Kelly and J G Blake* · A direct measurement of the generating function for photoelectron counting experiments in the case of a Lorentz spectral line

Contents

- L105** *R D Scott* · The effect of atomic excitation on the shape of the ^3H beta spectrum near the end point
- L109** *P Ray Chaudhuri* · Elastic scattering of electrons by solar neutrinos and weak interaction theories
- L111** *R A Cairns* · Explosive instability in a collisionless shock
- L114** *P Hutchinson, M Ross, P Schofield and W R Conkie* · Fluid order and freezing

Papers

- 749** *M C Durgapal and G L Gehlot* · Spheres with varying density in general relativity
- 756** *C D Collinson* · Special quadratic first integrals of geodesics
- 761** *M Cohen and T Feldmann* · Lagrange multipliers and bounds to quantum mechanical properties
- 773** *G J Papadopoulos* · Magnetization of harmonically bound charges
- 782** *D L Misell* · Image formation in the electron microscope I. The application of transfer theory to a consideration of elastic electron scattering
- 798** *D L Misell* · Image formation in the electron microscope II. The application of transfer theory to a consideration of inelastic electron scattering
- 813** *D F Walls* · Quantum theory of nonlinear optical phenomena
- 827** *E Jakeman, C J Oliver and E R Pike* · Clipped correlation of integrated intensity fluctuations of gaussian light
- 836** *P C W Davies* · Extension of Wheeler-Feynman quantum theory to the relativistic domain I. Scattering processes
- 846** *T M Aye* · Reggeized differential cross sections for fermion-exchange processes in the covariant formalism
- 856** *A P Patro and P Sen* · Parapositronium lifetime
- 859** *C S Lai and S Y Lo* · Sum rule for e^+e^- annihilation and $U(3) \otimes U(3)$ symmetry breaking
- 868** *S C Tonwar and B V Sreekantan* · Time structure of hadrons in extensive air showers and models of high energy hadron interactions
- 883** *R C Johnson* · Theory of πK scattering near threshold
- 888** *A J Curran* · The dispersion energy relation for ultra-high energy nuclear reactions in emulsion
- 895** *F Ashton, R B Coats, J King, K Tsuji and A W Wolfendale* · Search for quarks using a flash tube chamber
- 908** *D C Bailey, P E Carr, J L Durell, A N James, M W Greene and J F Sharpey-Schafer* · Decay and lifetimes of levels in ^{21}Ne
- 918** *M G F Dias, M F da Silva and C M da Silva* · Rotational properties of the ^{24}Mg doublet at 2.7 MeV
- 923** *S S De and K De* · Weak interaction of photons and the process $\nu + Z \rightarrow \nu + Z + \lambda^+ + \lambda^-$
- 928** *K Srinivasa Rao* · Analogues of giant resonances and photoproduction of positive pions from ^{16}O
- 934** *R Rosa* · Ion transit time effects in the plasma sheath
- 944** *S K Bhattacharyya, P K Bandopadhyay and A K Barua* · Heat conductivity of the nonpolar-polar gas mixtures $\text{Ar}-\text{CH}_3\text{Cl}$ and $\text{Xe}-\text{CH}_3\text{Cl}$
- 952** *C S M Doake and P W F Gribbon* · Ion motion in liquid nitrogen

- 973** **Author Index (with titles), Vol 4**

Subject index

Introduction

The entries in this index refer to the papers and letters by their page number. The entries are grouped under headings. If a heading for a particular subject does not appear, the subject may be in the form of a crossreference to another heading, perhaps of a more general nature. Many of the headings are subdivided by the use of subheadings, which are indented (ie printed slightly to the right) and commence with a small letter.

The information contained in the subject index is illustrated by the following example:

Plasma, *see also* Electric discharges; Electrons; Ions

ions, transit time effects in plasma sheath 934-43

stability
Bernstein wave instability in collisionless shocks L65-7

Associated with the main heading 'Stability of plasma' is a 'see' crossreference as follows:

Stability of plasma, *see also* Plasma stability

This means that for papers on 'Stability of plasma' the reader should consult the subheading 'stability' of 'Plasma' as displayed above.

Arrangement of headings and subheadings

The headings and crossreferences are arranged throughout the index in alphabetical order according to the 'word by word' system. The subheadings are themselves arranged in alphabetical order under their respective headings.

Arrangement of entries under headings

Entries are arranged in four distinct groups as follows:

First group: arabic numerals

Second group: English alphabet (A-Z), roman numerals, Greek alphabet (excluding elementary particles)

Third group: elementary particle symbols, that is, the Greek and English alphabet, eg μ (muon), p (proton)

Fourth group: chemical formulae (including entries beginning with nuclei, eg ^{57}Fe).

Nuclei

Papers on nuclei whose mass number (or mass number range) is given are listed under a set of headings which begin 'Nuclei ...', eg Nuclei with $6 \leq A \leq 19$ where A is the mass number.

- Aberrations, optical
 - Fresnel ether drag observed L1-3
- Absorption, *see also* Alpha particles; Cosmic rays; Protons and antiprotons
 - plasma, intensity dependence of free-free absorption 574-82
- Afterglow, *see* Discharges, electric
- Air showers, *see* Cosmic rays/showers and bursts
- Alpha decay, *see* Alpha particles; Nuclear models
- Alpha particles
 - binding energy calculation using velocity dependent potential containing tensor component 44-8
